### The Best Values in Systems and Service

We would like to take this opportunity to introduce our company to you. Martens Heating and Mechanical has been in business in the Fox Valley area since 1976. Fully licensed and insured, Martens Heating and Mechanical is committed to providing **value** and service to our many residential and commercial customers. This is a mission we do not take lightly.

To us, **value** means giving our customers the best possible system their money can buy. To achieve this end, we are proud to offer a wide selection of product lines. By working closely with our customers to determine their priorities, we can then select products to custom design a system that will deliver the performance and features they are looking for in home comfort. This unique approach takes advantage of the best features and innovations from each manufacturer, rather than using a package system from a single manufacturer.

This approach can mean savings to you as well as increased satisfaction. Customers can choose forced air systems from American Standard, Bryant, Payne, and Goodman. We offer a wide selection of furnace sizing and models to fit every home efficiently. Central Air is available in SEER ratings from 13 to 18. We always take advantage of any special pricing or rebates and pass the savings along to you. To compliment the forced air system, we have a variety of high efficiency filters, heat recovery ventilators, UV lights and thermostats to provide the advantages of the latest technologies in the industry.

Martens Heating and Mechanical is also the company to call for all your hydronic needs. We can expertly install in-floor tubing and accessories using a boiler or water heater to provide the heat. This system can also be integrated with forced air using ductwork and a hot water coil to create a system that has the comfort of hot water with the speed and cooling capabilities of forced air. Boilers by Bryant, Peerless, and NTI are available with a wide range of efficiencies to meet all needs.

Martens Heating and Mechanical has crews to keep your projects running smoothly and on-time. We have expert custom duct fabrication for each new home to maximize space and provide smooth even air flow to all rooms. Our installers make it a point to work closely with the other building team members such as plumbers, etc. to ensure that all mechanicals will fit seamlessly into each house. Martens Heating and Mechanical would be proud to have the opportunity to offer a bid on your next project.

Sincerely,

Dean and Linda Martens
